

ICS Cybersecurity Evaluation (401) Training

Hawaii Emergency Management Agency OPSEC Exercise

Identify Potential Security Risks.

Time: 10 minutes

Resources: N/A

This does

be submitted
after
completion.

Context

As part of a public relations campaign, Hawaii invited the media members into their emergency management agency to help alleviate public tension surrounding potential attacks. The image below was taken by one of the touring photographers. Some time later, a false alarm was raised about a missile attack and this image was used as a stock photo in media reporting about the false alarm.

Instructions

Using this image that was available to the public, what security concerns can you identify that are visible? What information is given away from this simple photo used in a newspaper article. *Analyze and find as many OPSEC concerns as you can first on your own, then proceed to the next page for some identified answers.*

Answer Review

While this list gives some obvious answers, a person with expertise in an area may glean additional information that could potentially be harmful (example, #2 and #8 in green below).

1. A security camera is out, revealing a gap in the physical security.
2. A map of the Pacific off the US West coast.
3. An open email, possibly showing email addresses, names, and more that can be used for phishing attacks.
4. A list of information, possibly used to make phone calls or other information.
5. A security badge example, making it possible to duplicate.
6. Post-it notes. Potentially contain usernames or passwords.
7. See #6
8. If knowledgeable, a person would recognize the country outline and know where it was and what this station monitored.
