

ICS Cybersecurity Evaluation (401) Training

Asset Inventory Prioritization

Prioritize Assets of a Network Map.

Time: 15 minutes

Resources: Pen and paper

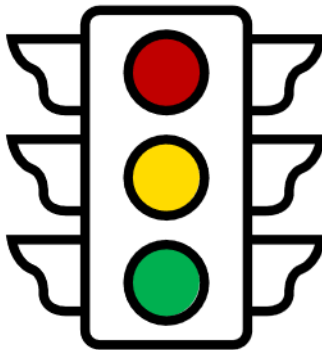

This does
NOT need to
be submitted
after
completion.

Instructions

In this practice activity, you are assigned the task to prioritize assets from an existing network map (found on the next page). As you consider the map, assign a red, yellow, or green condition to each asset (**Red** being the higher priority and **Green** being the lower one).

Do your best to assign priority based on your own past experiences to give context to the network map. To help prioritize, ask yourself the question:

If we lose that (server, HMI, switch, etc.) what impact will that have?
